

## ISO 14612:2004, Ships and marine technology - Ships bridge layout and associated equipment - Additional requirements and guidelines for centralized and integrated bridge functions

ISO 14612:2004 specifies technical requirements for the enhanced functionality of ships bridge layout and design, with the key navigational functions centralized and integrated, for the purpose of securing safe and efficient operation of the ship, berth-to-berth, regardless of the watchkeeping arrangement in place at the time. These requirements are generally additional to those given in ISO 8468. Where there are physical limitations in applying this International Standard, i.e. to small ships or ships of unusual design, the general principles still apply and can be implemented as far as practicable. It is applicable to seagoing ships where bridge duty is regularly maintained.
