

Florescein and ICG Angiography: Textbook and Atlas

Fluorescein angiography is an indispensable part of ophthalmologic diagnosis and education, providing key insights into pathogenesis and treatment. Using nearly 900 illustrations, this new edition of the classic text/atlas covers all the clinically relevant diseases that can be diagnosed using fluorescein angiography - and is the first to include the relatively new technique of ICG angiography. The result is an authoritative, up-to-date reference, packed with superb illustrations and clinical examples, that is ideal for residents and general ophthalmologists who need to update and refresh their diagnostic skills.
