

# Computer-Based Construction Project Management: Pearson New International Edition

For senior-level courses in Construction Project Management, and undergraduate/graduate-level courses in Computer-Aided Construction Management. This text views basic project management concepts from an information technology perspective. It contains comprehensive coverage of quantitative construction management techniques for planning, scheduling, estimating, cost optimization, cash flow analysis, bidding, and project control. All concepts are presented both manually and on computer applications, with a single case study to clearly demonstrate the evolution of concepts in the successive chapters.
