

# ISO 23794:2003, Rubber, vulcanized or thermoplastic - Abrasion testing - Guidance

ISO 23794:2003 provides guidance on the determination of the abrasion resistance of vulcanized and thermoplastic rubbers. It covers both solid and loose abrasives. The guidelines given in ISO 23794:2003 are intended to assist in the selection of an appropriate test method and appropriate test conditions for evaluating a material and assessing its suitability for a product subject to abrasion. Factors influencing the correlation between laboratory abrasion testing and product performance are considered, but this International Standard is not concerned with wear tests developed for specific finished rubber products, for example trailer tests for tyres. This title may contain less than 24 pages of technical content.
