

State, Land and Democracy in Southern Africa (Contemporary African Politics)

Each country in southern Africa has a unique history but in all of them socio-economic inequalities and high poverty levels weaken the governments legitimacy and represent a challenge to models of economic development. One key issue appears to be the solution of the land question. This vital concern affects both citizenship and democracy in the political systems of the region, yet no government has shown the capacity or commitment to solve it. In this volume leading European, American and African scholars explore in detail the relationship between state, land and democracy. They examine the historical background of asset allocation and its impact on questions of nationality, the definition of citizenship, human rights and the current political and economic processes in southern Africa.
