

ISO 13784-1:2002, Reaction-to-fire tests for sandwich panel building systems - Part 1: Test method for small rooms

ISO 13784-1:2002 specifies a test method for determining the reaction to fire of sandwich panel building systems for small rooms and the resulting flame spread on or within the sandwich panel building construction when it is exposed to heat from a simulated internal fire with flames impinging directly on its internal corner. The test method is not intended for evaluating a products fire resistance. ISO 13784-1:2002 is applicable to both freestanding and self-supporting, and frame-supported, sandwich panel systems. It is not applicable to sandwich panel products that are glued, nailed, bonded or similarly supported by an underlying wall or ceiling construction.
