

Environmental Contamination Handbook

Environmental contamination is a topic of great concern. Environment reduces hazards, while man amplifies them. This is not a supposition, but a gist of the conclusions made from studies of experts from all over the world. The last two centuries have seen an unsystematic expansion and overexploitation of natural resources by man leading to damage and destruction of our own environment. Environmental pollution is the effect of illogical use of resources at the incorrect place and at the incorrect time. Environmental pollution has affected the lifestyle of people almost all over the world, and has decreased the span of life on earth. Today, we are forced to compromise with such environmental circumstances, which nobody had predicted would need to be tackled with for the survival of humanity and other life forms. This book will help the readers find out the underlying crisis and help monitor their solutions through various methods and approaches.
