

ISO 6165:2006, Earth-moving machinery - Basic types - Identification and terms and definitions

ISO 6165:2006 gives terms and definitions and an identification structure for classifying earth-moving machinery designed to perform the following operations: excavation, loading, transportation, and drilling, spreading, compacting or trenching of earth and other materials (e.g. during work on roads and dams, and on building sites). Its purpose is to provide a clear means of identifying machines according to their functions and design configurations. This title may contain less than 24 pages of technical content.
