

Volume and the Nonlinear Dynamics of Stock Returns (Lecture Notes in Economics and Mathematical Systems)

This manuscript is about the joint dynamics of stock returns and trading volume. It grew out of my attempt to construct an intertemporal asset pricing model with rational agents which can explain the relation between volume, volatility and persistence of stock return documented in empirical literature. Most part of the manuscript is taken from my thesis. I wish to express my deep appreciation to Peter Kugler and Benedikt Poetscher, my advisors of the thesis, for their invaluable guidance and support. I wish to thank Gerhard Orosel and Gerhard Sorger for their encouraging and helpful discussions. Finally, my thanks go to George Tauchen who has been generous in giving me the benefit of his numerical and computational experience, in providing me with programs and in his encouragement.

Contents

1 Introduction 1

2 Efficient Stock Markets Equilibrium Models of Asset Pricing 8

2.1 The Martingale Model of Stock Prices 8

2.2 Lucas Consumption Based Asset Pricing Model 9

2.3 Econometric Tests of the Efficient Market Hypothesis 13

2.3.1 Autocorrelation Based Tests 14

2.3.2 Volatility Tests Time-Varying Expected Returns 16

2.3.3 The Informational Role of Volume 25

3 Standard Grossman-Stiglitz Model 29

3.1 The No-Trad Result of the BEO Model 31

3.2 A Model with Nontradable Asset 34

3.3 Volume and Volatility of Stock Returns 37

4 Empirical and Numerical Results 43

4.1 Empirical and Numerical Results 45
